International application No. PCT/EP03/09597

ad item V.:

None of the documents cited in the international search report discloses or fairly suggests a process for producing water-soluble or water-swellaable cationic polymers by polymerizing at least one cationic monomer and at least one water-soluble monomer in such a way that the polymer has an overall cationic charge in the presence of a salt and an amphoteric dispersant having a overall negative charge.

The resulting aqueous dispersions show increased stability and reduced viscosity while maintaining a solids content above 20%.

The dispersions may be used in various applications such as water treatment, cosmetics, papermaking etc.

The subject matter of claims 1 - 5 of the present application therefore fulfils the requirements of Article 33(2) - (4) PCT.
